

Childhood Feeding, Nutrition & Growth Programme

IMPORTANCE OF CHILDHOOD GROWTH

An Introductory Webinar
for Healthcare Professionals

Saturday | 3.30PM | March 9, 2024

REGISTER NOW!

Understanding and monitoring growth is pivotal in ensuring the holistic well-being of children. The early years of life are crucial for growth and physical, cognitive, and emotional development. Regular assessments of a child's growth not only provide insights into their nutritional status but also serve as key indicators of potential health issues. Tracking height and weight aids in the early detection of growth-related abnormalities and allows for timely intervention.

Join us as IMFeD experts share key insights on identifying poor growth and managing it through proper nutrition and lifestyle habits. As healthcare advocates, our vigilance and commitment to monitoring childhood growth contribute significantly to building healthier, thriving communities.
